DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

Claims 1-18 are allowed.

Reason for Allowability

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, in combination with other limitations recited in the claims, the limitations of an automotive alternator comprising:

- a shaft rotatable supported by a case;
- a rotor axed to said shaft, said rotor being provided with a winding for generating a magnetic flux on passage of an electric current wherethrough; and
- a plurality of claw-shaped magnetic poles disposed circumferentially on an outer circumferential side of said gield winding, said claw-shaped magnetic poles being magnetized by said magnetic flux generated by said held winding, and

a stator provided with a cylindrical stator core supported by said case so as to envelop said rotor, a plurality of slots extending axially being formed in said stator core so as to line up circumferential; and a stator winding installed in said stator core, wherein said stator core is constructed by laminating a magnetic steel plate, said stator core being provided with a cylindrical base portion; a plurality of teeth portions disposed so as to extend from said base portion toward an axial center, and said plurality of slots, each of said slots being denned by said base portion and an adjacent pair of said teeth portions; ventilation channels are formed by a coil end group of said stator winding and said teeth portions of said stator core, a cooling airflow

generated by rotation of said rotor Sowing through each of said ventilation channels in a radial direction from an inner circumferential side, and *each of said teeth portions is formed such that a radial length ht and a width bt thereof satisfy an expression $0.15 < bt/ht < 0.4$.*

The Examiner concurs with the applicant argument. Therefore, comparing to the prior-art of the record, none of the prior art references of the record, either stand alone or in combination, has taught or suggest the above-mentioned features, particularly the ratio of the stator teeth *radial length ht and a width bt to be $0.15 < bt/ht < 0.4$* , in combination with other limitations recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
